

Exhaust System Repair Tape

Technical Data Sheet

Rev 02/22

PRODUCT DESCRIPTION: Exhaust System Repair Tape is a 2 mil, high strength aluminum foil coated with an aggressive, high temperature acrylic adhesive system. The foil conforms well to both fibrous and sheet metal ducts providing an excellent vapor seal. The malleable foil also conforms well around corners and to irregular surfaces.

WORKS BEST ON: Aluminum foil tape offers high performance adhesive system with temperature capabilities for use as muffler bandage. It can also be used as waterproof sealing, heat reflection/dissipation, and has reliable properties for masking in paint stripping and electroplating. Restores exhaust system components. Fast, easy and economical Exhaust System Tape will stop exhaust noise and seal out dangerous fumes. Use on conventional exhaust systems.

PRODUCT FEATURES:

Color: Silver

Temperature Range: -35°F to 260°F

Storage: Store in a cool, dry environment in unopened container.

Application information: Thoroughly clean surface of exhaust system to be repaired with sandpaper, wire brush or steel wool. Peel liner from tape and discard. Make sure exhaust system is not hot before applying tape. Wrap tape tightly around repair area. Overlap the winding 1/2" apart making sure repair is completely covered.

See MSDS for more complete information, safe handling instructions and first aid.

Non-Regulated
